

General software license conditions for Nautibus engineering ETS App

1. Terms of Service

Obtaining a license of our software gives you the right to use the software. The software remains the property of Nautibus engineering. The purchaser of the license has the right to use the software on one computer. If the software shall be used for multiple computers for each additional computer an additional license is required.

2. Scope of License

The customer will receive a perpetual, non-exclusive and non-transferable right to use the ETS App.

The license entitles the customer to use the software for its own operational purposes in accordance with the supplied program description.

Since the license was granted without any time limit, the customer is entitled to transfer the software to a subsequent user, provided that the customer does not retain any copies of the app, back also in parts.

3. Limitation of Liability and Warranty

The ETS App is available in the current version. This version was tested by Nautibus engineering length and in depth. As part of the program maintenance release changes and updates are created and via the KNX Shop free or paid provided.

The user of this software is obliged to adhere to the guidelines in the program description and examine the results of ETS App to plausibility.

The manufacturer is not responsible for defects or damage caused by a malfunction of the program. In particular, no legal liability for consequential damages is accepted.

In case of a complaint, the licensee is required to provide a detailed and comprehensive description of the defect. The warranty period is 24 months from date of purchase.

In default of a significant defect rectification within a reasonable period, the licensee shall be entitled to rescind the contract and to demand a refund of the license fee. Further claims on the part of the licensee are excluded.

Claims for damages against the manufacturer are excluded. In no event Nautibus engineering is liable for damages resulting from the use or inability to use of EiPlan. In a country, where this disclaimer shall not be valid, the software may not be used. If the software is used anyway, you do so at your own risk.

4. Privacy statement

1) Nautibus engineering stores customers name and e-mail address and the version of purchased App.

2) The data are used for support, statistical purposes and accounting documents.

3) Revocation of your consent to data processing

Many data processing operations are only possible with your express consent. You can revoke an already issued statement. This can be done informally by e-mail to us. The legality of the data processing carried out until the revocation remains unaffected.

The email address to contact in case of opt-out is mailto: support@nautibus.de
